

42 unique streams for harmonizing and cleansing the 7 chakras.

Composed to three decimal places based on three harmony theories:

- Solfeggio (sacred frequencies)
- Proton resonance PLUS Cosmic octave
- Classical 432 Hertz scale

Total playing time approx. 15 hours 1.3 gigabytes of storage space, MP3 format

According to Indian teachings, every human being has seven chakras. These are invisible energy centers or energy vortexes along the spine that are responsible for the flow of life energy (prana) and connect the subtle body with the biological 3D body.

They form a bridge system between the inner and outer worlds. If they are disturbed, blocked, weak, or out of tune, this can have negative consequences for the body and psyche.

The aim of these neurostreams is to activate, cleanse, and strengthen the classic seven chakras through acoustic attunement to ancient and sacred sound systems: Solfeggio and 432 Hertz, as well as the modern teaching of resonance octaving.

Seven important "endocrine" (i.e., hormone-producing) glands in the human body can be assigned to these chakras in conventional medicine. These glands control our body and mind—and should function properly at all times.

Listening recommendation: There are seven days in a week, and you could focus on one chakra each day. Ascending, starting on Monday with the root chakra and ending on Sunday with the crown chakra.

The moods are very meditative; mindful listening is sufficient. Headphones are necessary (!), and your eyes can be open or closed.
